

Cellular Shades

SM Automatic Model 9600 Motorized Lift System is specifically designed to lift cellular and pleated shades. The Model 9600 features a slim head rail; with the motor, all mechanical components, and even the optional wireless remote control electronics fully concealed within. Conversion to a motorized system is made by attaching the standard shade head rail to the bottom of the Model 9600 head rail, and replacing the shade cords with a flat 2.6mm (1/10") tape. With the Model 9600, even the very largest shades fabricated can be effortlessly operated at the touch of a button.

When providing shades to SM Automatic for motorization, it is extremely important to call for fabrication specification requirements before ordering shades.

Standard Duette head rails are required. Easy-Rise, Ultra-Glide, and Easy-Glide head rails are not compatible with the Model 9600. For approximate stacking dimensions, add 2.5" to shade manufacturer's manual shade stacking guide.

SM Automatic Model 9600 Motorized Lift System including Cellular Shade

SM Automatic also offers the Model 9600 Motorized Lift System complete with cellular shades. So you have a choice as to whether you want to order your own shades directly from the shade manufacturer, and have the shades shipped to SM Automatic for motorization; or order the entire product from a single source.
